Overview

What are the course deliverables?

Connect, import, shape, and transform data for business intelligence (BI) Visualize data, author reports and schedule automated refresh of your reports Create and share dashboards based on reports in Power BI desktop and Excel Use natural language queries Create real-time dashboards.

More about this course

Power BI is quickly gaining popularity among professionals in data science as a cloud-based service that helps them easily visualize and share insights from their organizations' data. In this data science course, you will learn from the Power BI product team at Microsoft with a series of short, lecture-based videos, complete with demos, quizzes and hands-on labs. You'll walk through Power BI, end to end, starting from how to connect to and import your data, author reports using Power BI Desktop, and publish those reports to the Power BI service. Plus, learn to create dashboards and share with business users--on the web and on mobile devices. Course Eligibility some experience in working with data from Excel, databases, or text files.
